Slack Integration

Administration · https://www.bookedscheduler.com/help/administration/slack-integration/

You can begin a Booked reservation request directly from Slack. You will need to create a Slack App in your Slack workspace for this integration to work.

When creating your App, choose *Slash Commands* in the *Add features and functionality* section. Give your command a name you will remember – we recommend */book*. Set the *Request URL* to https://yourhost/Web /integrate/slack.php and the *Usage Hint* to resource-name

You can then use */book resource-name* from Slack to begin a reservation request, substituting resource-name for an actual resource. Providing no resource-name will being a standard booking.
